

DOORBULT FEEDLOTS | POLOKWANE, LIMPOPO

SENIOR WORKSHOP AND MAINTENANCE MANAGER

Manage the technical work that keeps our farm running.

At a feedlot, feed needs to be mixed and handled every day. Out in the fields, equipment has to be ready when the production program demands it. Corrals, pivots, and electrical systems must function reliably.

We are looking for an **experienced, hands-on technical manager** who understands these needs and can lead the workshop and maintenance team with clear priorities.

Your responsibilities include:

- Vehicles, trucks, tractors, loaders, feed mixers, and agricultural implements.
- Corral maintenance, gates, handling facilities, and general farm infrastructure.
- Pivots, pumps, and associated equipment.
- Electrical fault-finding and maintenance within your expertise, coordinating specialist work where necessary.
- Staff, work orders, parts, tools, cost management, and external service providers.

We are looking for someone who can identify the cause of a problem, plan the repair, and make sure the work is properly completed. You need to be able to be technically involved yourself, while also organizing and following up on your team's work.

Proven technical experience and experience with workshop or maintenance management is essential. A relevant trade qualification will strongly work in your favour. Describe your experience with diesel mechanics, hydraulics, welding, axles, and electrical systems in your application.

You will be part of a management team that wants to promote better planning, stronger teamwork, and the development of staff. We are looking for someone who shares knowledge and helps build the technical capability of the team.

Applications from all over South Africa are welcome. The position is based in Polokwane.

Send your CV, relevant qualifications, and two contactable references to **doornbult@gmail.com**. Indicate your availability and expected compensation.
